What is Snobike?
Snobike is a revolution in biking. It equips a mountain bike with a ski system and tread, allowing for travel through any winter condition.

Why have a Snobike?
Many forms of transportation require burning fossil fuels. Biking is one of the few that requires no fuel. Unfortunately, biking is difficult if not impossible during the snowy winter months. Snobike will eliminate this difficulty with its tread and ski design, allowing for a cleaner mode of transportation and reducing fuel costs.
