Reading Questions for "The Analysis of Biological Data", Sections 2.1–2.2

[Submit your responses using the webform below.]

1. What things do the authors mention as being aspects of "good" or "bad" displays of data?
2. What things should be included in the verbal description of a distribution? Do these things apply equally to distributions of a categorical variable vs. distributions of a quantitative one?
3. Identify one item (a concept, a step in an example, a statement, etc.) from this reading assignment you found difficult or confusing.
