Reading Quiz

1. We use the symbol _______ to stand for the mean of a distribution and the symbol _______ to stand for the mean of a density curve.

2. A normal density curve has what distinctive shape?

Outline

1. Examples of normal distributions
   (a) body temperature of college students: $\mu = 98.2$, $\sigma = .73$
   (b) 19 year old US males in 2000, height in inches: $\mu = 69.6$, $\sigma = 5.8$
   (c) LDL cholesterol levels of 20 year old females: $\mu = 110$, $\sigma = 30$
   (d) Stanford-Binet IQ Test: $\mu = 100$, $\sigma = 15$

2. Finding proportions using the normal density

3. $z$-score (or standardized value)

4. Using Table A to find proportions
   (a) proportion of individuals with IQ less than 115

   (b) proportion of individuals with IQ greater than 115

   (c) proportion of individuals with IQ between 80 and 120

   (d) proportion of 19 year old males with height less than 6 feet (72 inches)

   (e) proportion of 19 year old males between 5 feet and 6 feet

   (f) the first quartile of LDL cholesterol of 20 year old females
