Preface	ix
1 Euclid's <i>Elements</i>	1
1.1 Geometry before Euclid	1
1.2 The logical structure of Euclid's <i>Elements</i>	2
1.3 The historical importance of Euclid's <i>Elements</i>	3
1.4 A look at Book I of the <i>Elements</i>	5
1.5 A critique of Euclid's <i>Elements</i>	8
1.6 Final observations about the <i>Elements</i>	11
2 Axiomatic Systems and Incidence Geometry	17
2.1 Undefined and defined terms	17
2.2 Axioms	18
2.3 Theorems	18
2.4 Models	19
2.5 An example of an axiomatic system	19
2.6 The parallel postulates	25
2.7 Axiomatic systems and the real world	27
3 Theorems, Proofs, and Logic	31
3.1 The place of proof in mathematics	31
3.2 Mathematical language	32
3.3 Stating theorems	34
3.4 Writing proofs	37
3.5 Indirect proof	39
3.6 The theorems of incidence geometry	40
4 Set Notation and the Real Numbers	43
4.1 Some elementary set theory	43
4.2 Properties of the real numbers	45
4.3 Functions	48
4.4 The foundations of mathematics	49
5 The Axioms of Plane Geometry	52
5.1 Systems of axioms for geometry	53
5.2 The undefined terms	56
5.3 Existence and incidence	56
5.4 Distance	57
5.5 Plane separation	63
5.6 Angle measure	67

vi	Contents	
5.7	Betweenness and the Crossbar Theorem	70
5.8	Side-Angle-Side	84
5.9	The parallel postulates	89
5.10	Models	90
6	Neutral Geometry	94
6.1	Geometry without the parallel postulate	94
6.2	Angle-Side-Angle and its consequences	95
6.3	The Exterior Angle Theorem	97
6.4	Three inequalities for triangles	102
6.5	The Alternate Interior Angles Theorem	107
6.6	The Saccheri-Legendre Theorem	110
6.7	Quadrilaterals	113
6.8	Statements equivalent to the Euclidean Parallel Postulate	116
6.9	Rectangles and defect	123
6.10	The Universal Hyperbolic Theorem	131
7	Euclidean Geometry	135
7.1	Geometry with the parallel postulate	135
7.2	Basic theorems of Euclidean geometry	137
7.3	The Parallel Projection Theorem	139
7.4	Similar triangles	141
7.5	The Pythagorean Theorem	143
7.6	Trigonometry	145
7.7	Exploring the Euclidean geometry of the triangle	147
8	Hyperbolic Geometry	161
8.1	The discovery of hyperbolic geometry	161
8.2	Basic theorems of hyperbolic geometry	163
8.3	Common perpendiculars	168
8.4	Limiting parallel rays and asymptotically parallel lines	171
8.5	Properties of the critical function	181
8.6	The defect of a triangle	185
8.7	Is the real world hyperbolic?	189
9	Area	194
9.1	The Neutral Area Postulate	195
9.2	Area in Euclidean geometry	198
9.3	Dissection theory in neutral geometry	206
9.4	Dissection theory in Euclidean geometry	213
9.5	Area and defect in hyperbolic geometry	216
10	Circles	225
10.1	Basic definitions	226
10.2	Circles and lines	227

10.3	Circles and triangles	231
10.4	Circles in Euclidean geometry	238
10.5	Circular continuity	244
10.6	Circumference and area of Euclidean circles	247
10.7	Exploring Euclidean circles	255
11	Constructions	264
11.1	Compass and straightedge constructions	265
11.2	Neutral constructions	267
11.3	Euclidean constructions	270
11.4	Construction of regular polygons	272
11.5	Area constructions	276
11.6	Three impossible constructions	279
12	Transformations	284
12.1	The transformational perspective	285
12.2	Properties of isometries	286
12.3	Rotations, translations, and glide reflections	292
12.4	Classification of Euclidean motions	300
12.5	Classification of hyperbolic motions	303
12.6	A transformational approach to the foundations	304
12.7	Euclidean inversions in circles	310
13	Models	327
13.1	The significance of models for hyperbolic geometry	327
13.2	The Cartesian model for Euclidean geometry	329
13.3	The Poincaré disk model for hyperbolic geometry	331
13.4	Other models for hyperbolic geometry	336
13.5	Models for elliptic geometry	341
14	Polygonal Models and the Geometry of Space	345
14.1	Curved surfaces	346
14.2	Approximate models for the hyperbolic plane	357
14.3	Geometric surfaces	363
14.4	The geometry of the universe	369
14.5	Conclusion	375
14.6	Further study	375
14.7	Templates	384
 APPENDICES		
A	Euclid’s Book I	392
A.1	Definitions	392
A.2	Postulates	394

viii Contents

A.3	Common Notions	394
A.4	Propositions	394
B	Other Axiom Systems	398
B.1	Hilbert’s axioms	398
B.2	Birkhoff’s axioms	400
B.3	MacLane’s axioms	401
B.4	SMSG axioms	402
B.5	UCSMP axioms	405
C	The Postulates Used in this Book	408
C.1	The undefined terms	408
C.2	The postulates of neutral geometry	408
C.3	The parallel postulates	409
C.4	The area postulates	409
C.5	The reflection postulate	410
C.6	Logical relationships	410
D	The van Hiele Model	411
E	Hints for Selected Exercises	412
	Bibliography	421
	Index	425
